

## DNA-Encoded Library Technologies as Integrated Lead Finding Platforms for Drug Discovery

**Jonas V. Schaefer, PhD**, Laboratory Head Encoded Library Technologies, Novartis Institutes for BioMedical Research (NIBR), Basel, Switzerland

The scope of targets investigated in pharmaceutical research is continuously moving into uncharted territory. Consequently, finding suitable chemical matter with the current compound collections is proving increasingly difficult. Encoded library technologies allow for the rapid exploration of a large chemical space for the identification of ligands for such targets. In the presentation, we will discuss how these binders enable drug discovery projects and how we apply these platforms in our research.
